Experience

Education

General Assembly

October 2015

Web Development

Immersive

Vanderbilt University

May 2011

Bachelor of Arts, History

Projects

Weather-Text

April 2018

This is a simple Twilio function that sends the forecast or current conditions to an end user via SMS.

Slack-GitHub Integration POC

January 2018

This is a stripped-down version of a Slack webhook created to let team members know whenever a new build has been deployed.

Housing Justice

June 2017

This is a civic coding project that helped the Atlanta Legal Aid society in its lawsuit against an allegedly predatory lender.

Turner Broadcasting

October 2016 - present

- Collaborate with business and development team members on Guardian, an application that requests digital rights clearances from RSG Media's RightsLogic API
- Use Go (Golang) and React to add features to new digital rights management application
- Use Docker, Bash, and CircleCI to automate build and deployment processes
- Create integrations with tools used for collaboration (e.g., Slack) to notify the team of new builds and additional features

The Weather Company

June 2016 - September 2016

- Used Node.js and Handlebars to add features to a progressive web app used primarily in developing countries
- Used PhantomJS to automate collection of geographical information as part of the Global Domination project
- Used pure JavaScript to fix bugs on weather.com

Elegant Software Solutions

November 2015 - June 2016

- Wrote and maintained SQL Server stored procedures used to generate reports utilized by internal and external clients
- Used T-SQL and batch scripting to create a database maintenance plan that created daily differential and weekly full backups, compressed previous backups created in the same week, and deleted old backups.
